ARBINIUM

Whitepaper

General Introduction

General Intro

With the aid of our smart backend and data points, Arbinium offers all defi enthusiasts a one-stop shop for all their defi needs by ensuring that a token has the highest amount of accurate security measures.

Arbinium
A Smart Defi Protector

Arbinium

Problem

Why Arbinium is Needed?

01	**Troubles of upcoming traders**	Clueless newbies often fail to compete with the pro traders because of the lack of tools available to them
02	**Endless search for the answers**	They don't even get close to being profitable by scrolling through bscscans and seeking assistance from other degens
03	**Paradox of Choices**	So do you pour your own money and precious time learning this for months or wish to have a solutions just a click away?

Arbinium

Solution

Arbinium to the rescue

Our backend contract code and apis goes over tons of data points to give you the safety information you need.

SOLUTION 01

Honeypot detector

SOLUTION 02

Blacklist detector

SOLUTION 03

Price and liquidity info

SOLUTION 04

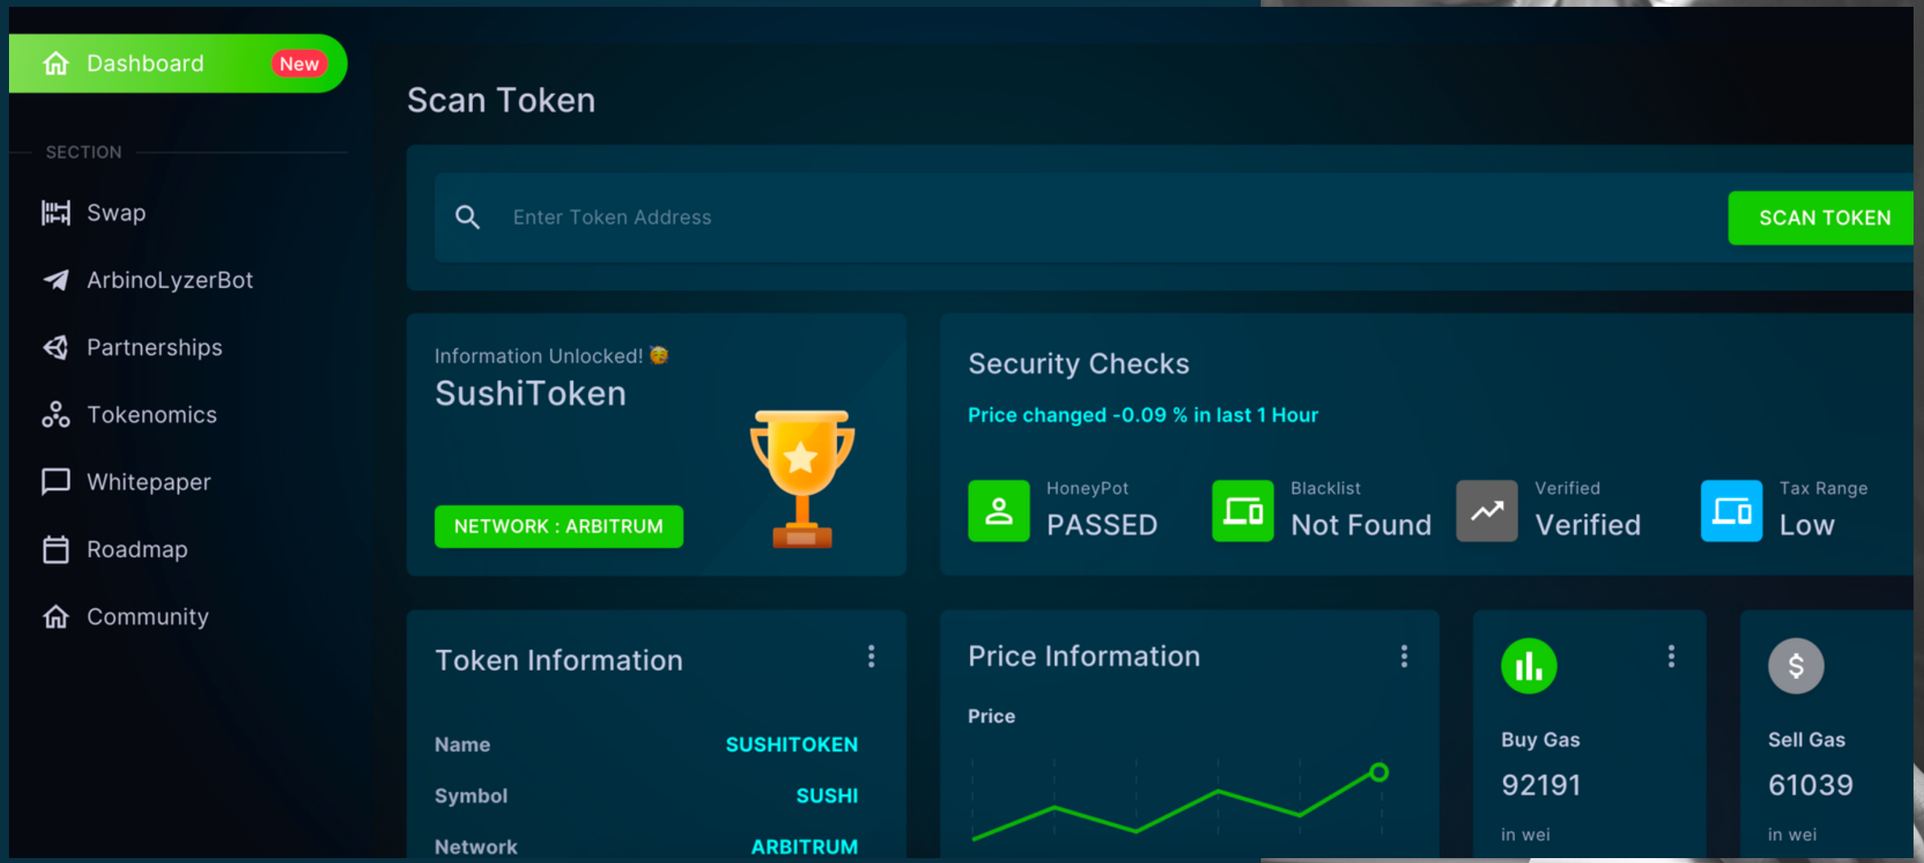
Token information

Arbinium

Blacklist detector -
A smart contract's blacklist feature prevents bots from buying and snipers from operating.

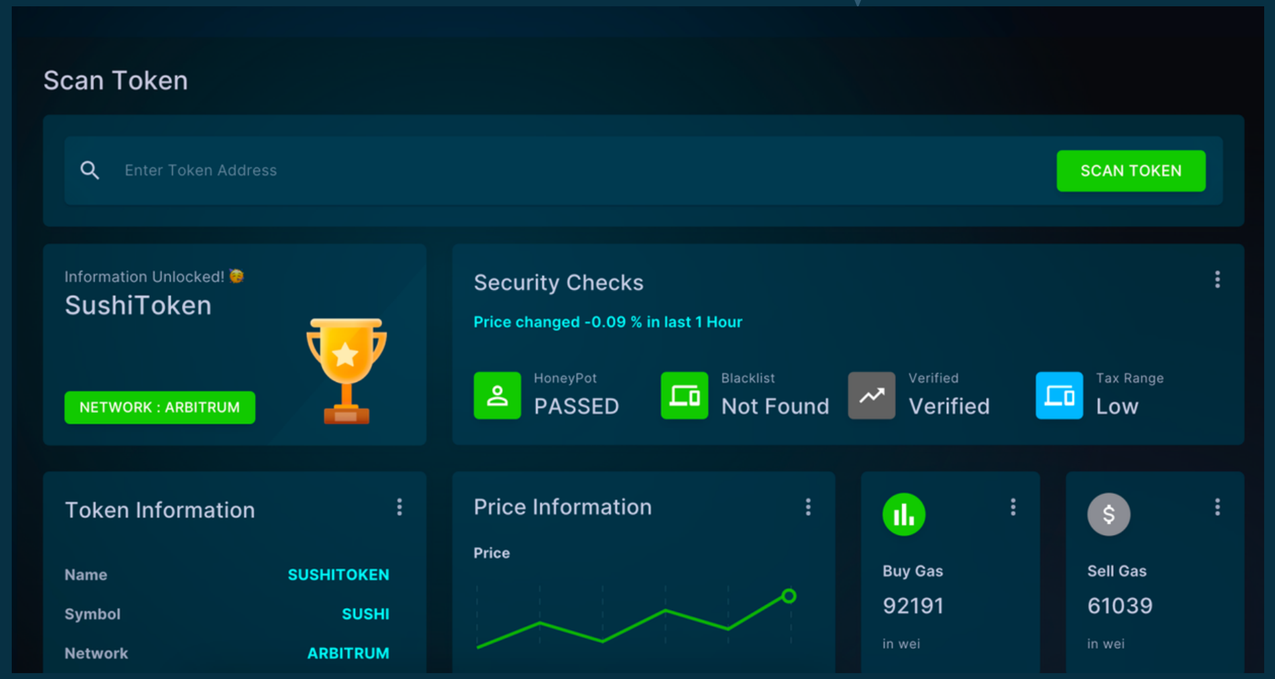
Misused by malicious devs this function can trap normal buyers and block their funds

After scanning the contract, Arbinium provides you with the blacklist information for the token so you can protect your money and avoid falling for scammers



Arbinium

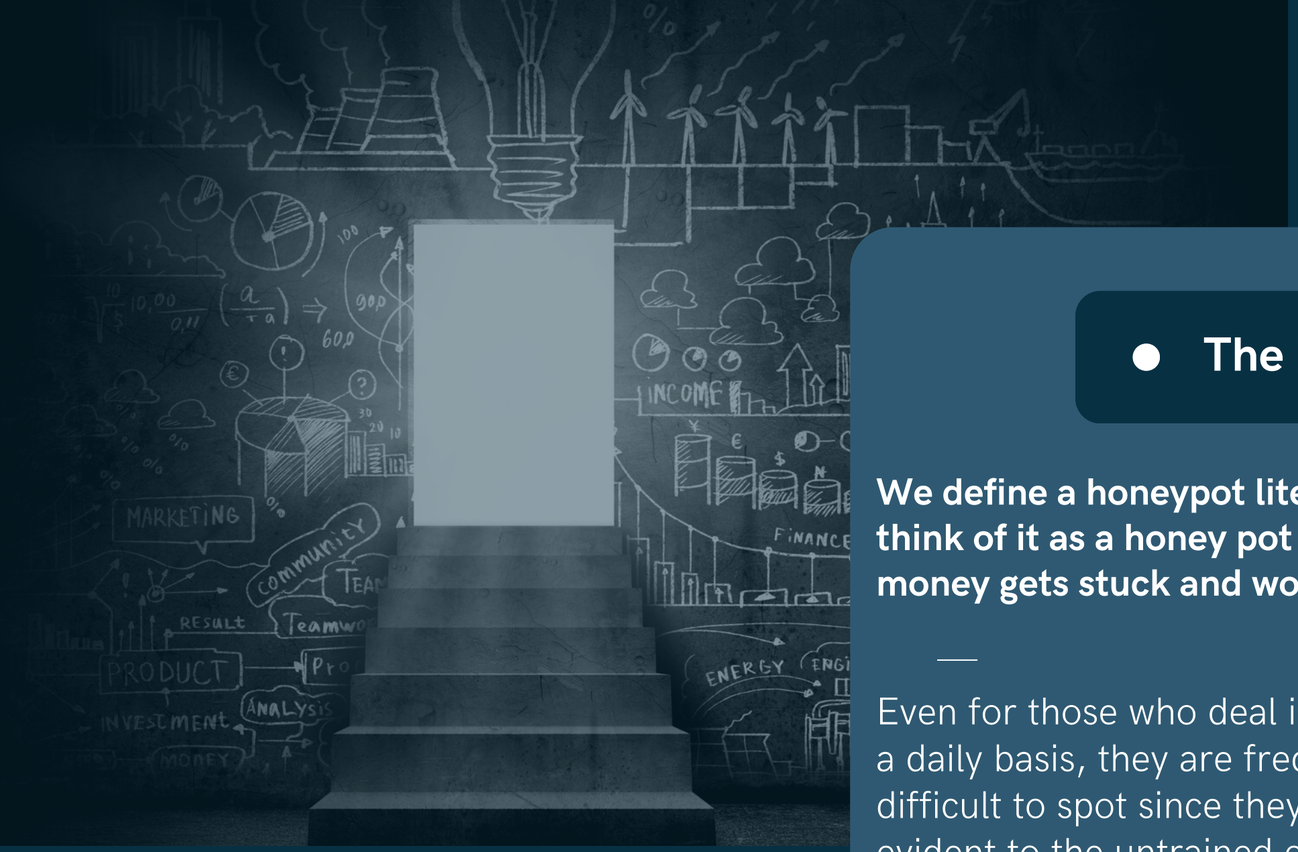
Honeypot = Passed$



Price and liquidity info

1. Without jumping to different charts our dapp will give you the current token price and relative liquidity pool info

2. Helps you keep your research data aligned and clean in one single window.



Arbinium

Honeypot detector

The Problem

We define a honeypot literally, we can think of it as a honey pot where your money gets stuck and won't drain.

Even for those who deal in tiny coins on a daily basis, they are frequently more difficult to spot since they are less evident to the untrained eye.

The Solution

Our honey pot detector function verifies that the token's buys and sales are genuine and functional

Our contracts makes a call to the concerning contract of the token to give you the above relevant info.

Arbinium

MultiDEX

Arbinium Multi-dex

FEATURE 01

Abritrage detector

FEATURE 02

Smooth Swap

FEATURE 03

Best Price

FEATURE 04

First one for ARB

Arbinium

Buy - Sell Tax

1 Buy - 0%

2 Sell - 0%

Arbinium scans the contract and give you the buy and sell data taxes that helps you to decide slippage on the trading token
